Chlorhexidine based Shock and Maintenance Treatment

Exceeds EPA regulatory standards for drinking water

- Reduces and maintains CFU (colony forming units) counts of <200 CFU/mL with regular use in dental unit waterlines (DUWL).
- Removes biofilm from DUWL containing odor causing bacteria.

Non-corrosive and gentle to equipment

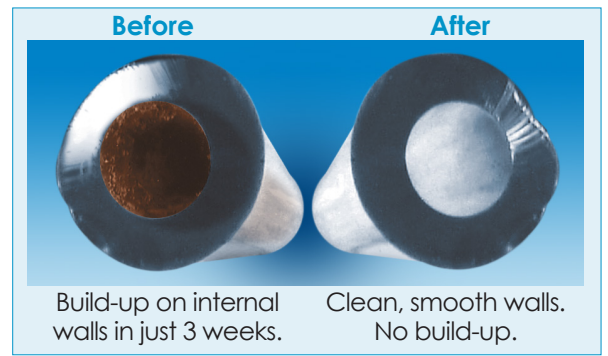

- pH-neutral formula provides initial shock and weekly maintenance treatment in one solution without the use of harsh chemicals.
- Fresh, minty taste.

No mixing or diluting required

- Ready-to-use solution can be used with any type of independent water bottle system. Doesn't leave a residue behind.

Fast, effective, and efficient application

- Purge DUWL, add Lines Cleaner, flush next day.
- Does not affect bond strength.

“Every dental practice should be using Monarch Lines Cleaner,” which is “an extremely economical solution, especially considering the importance of safety for our patients.”

Jeffrey Briney, DDS

“Monarch Lines Cleaner helps maintain safe bacteria levels in the waterlines, and it doesn't wear away the lines.”

Edward Lew, DMD
