Trusted Products for Superior Infection Control

Dental professionals find the Monarch family of infection prevention products creates a culture of safety for the entire practice team

The team at Tosa Dental in Wauwatosa, WI, uses every product in the Monarch product line, from the CleanStream Evacuation System Cleaner to the Upholstery Chair Cleaner and Conditioner, relying on them to provide effective, safe infection control.

The practice first invested in the products about 6 years ago, Practice Director Carolyn Miskell said, with the Monarch Surface Disinfectant Wipes quickly becoming a favorite. Miskell loves the easy-to-use wipes' low toxicity rating (it's lower than other popular disinfectants) and the true 1-minute kill time. The team uses the wipes in the operatory and the front office.

"It's a trusted product line that all team members can use," Miskell said. "And they're using these products day in and day out throughout their whole career, so you want to make sure what they're using is of the highest quality."

Reliable Disinfectant Wipes

The wipes come in 2 sizes, the standard large and extra-large, Miskell said, adding that one wipe is usually enough.

"Because of the liberal saturation and the extra-large size, we can reliably say we are cleaning and disinfecting the surface as it's intended to be without using 3 or 4 wipes," she said.

The new packaging design ensures the wipes stay saturated, so the user doesn't have to worry about them drying out with the container

repeatedly being opened and closed throughout the day. The cap is easy to take off, but the lid stays sealed when it isn't open, retaining moisture.

Because of the low toxicity, the business team can use the wipes in the front office without having to run back to the clinical environment to get gloves, Miskell said. The disinfectants can be used on all surfaces without causing degradation, which is another huge benefit. Team members can remove a wipe from the canister, wipe, and go for an easy, effective clean.

High Quality, Low Price Point

Finding similar rewards, Chicago-based Fresh Dental relies on the Monarch Surface Disinfectant Wipes and Monarch Surface Disinfectant Spray to turn over rooms between patients, cleaning and disinfecting all the equipment, surfaces, and chairs. Both products work efficiently and dry fast, Office Manager Amy Bejar said.

"They get the job done quickly and easily," she said. "It's affordable and you know it's going to do what it's supposed to do. Dr. [Jin] Nam is always looking for products that are better quality for your dollar, and the Monarch products seem to be that for us."

Delicate Cleaning

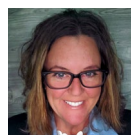

Miskell's team uses the Upholstery Chair Cleaner and Conditioner as part of regular chair maintenance and loves the results. The product doesn't dry out the fabric—it simply cleans and conditions the upholstery as intended. There are no worries about discoloration, film buildup, or cracking as with other products, keeping everything looking nice.

"The high-end materials are very delicate," Miskell said. "This product cleans and produces a nice shine without harming the chair upholstery."

Products You Can Count On

Miskell appreciates that the Air Techniques team is very knowledgeable and experienced, and that they're always available when she has a question. The office also uses Air Techniques equipment, and Miskell has been happy with those investments as well.

"I'm very loyal because I know I can count on them," she said. "We can look in our office and know we have quality equipment, clean dental lines, and a clean operatory. You can see each product is doing its job."

"I'm very loyal because I know I can count on them. We can look in our office and know we have quality equipment, clean dental lines, and a clean operatory."
